

LILY LAKE
(Anderson Lake)
Trescott Twp., Washington Co.
U.S.G.S. West Lubec, ME (7 1/2')

Fishes

Brook trout
Minnows

Hornpout (bullhead)
Ninespine
stickleback

Redbelly dace

Physical Characteristics

Area - 31 acres

Maximum depth - 7 feet

Temperatures:

Surface - 73°F

40 feet - 70°F

Principal fishery: Brook trout

Lily Lake, locally known as Anderson Lake, is located off the Crows Neck Road in Trescott. A dirt road provides vehicular access to the lake where canoes/small boats can be launched at a landing.

This small, shallow lake provides marginal habitat for brook trout. Although summer water temperatures throughout most of the pond are too warm for trout, a small springhole area offers refuge. The fishery is maintained by annual stockings of fall fingerling trout. The spring fishery is generally fairly good with anglers making decent catches of 7-9 in fish. Some have luck casting a worm and bobber from shore, while others troll small lures with good success. During our last check netting in August 1990, we obtained a sample of 10 trout that averaged 10.4 in long, and were in good condition. Unfortunately, small 6-9 in hornpout have become abundant, and because they compete strongly with the trout for food, this restricts the growth rate of the trout.

Surveyed - August, 1957
